

Connectivity

Product description

The product ensures the establishment of data connectivity for connecting to the Internet. Through the service, the client gets a data connection with required parameters. The product also includes the possibility of assigning public IP addresses.

Who it is intended for

For anyone who needs an Internet connection.

For anyone who cares about the quality, security and stability of their data connection.

For anyone who needs a high-speed data connection with above-standard parameters.

What the client gets

- Direct contact with HelpDesk
- Personal approach and customised data service
- High-speed connection with a transmission speed of up to 1Gb/s
- The possibility of assigning public IP addresses (IPv4, IPv6)
- The possibility of IP telephony
- Assistance with setting up home or corporate networks
- The possibility of housing active features
- Delivery of active features at reduced prices
- High service availability guarantee
- The possibility of above-standard ICT services (VPN, VLAN, IT Security, etc.)

Service specification

- The service is provided to a selected group of clients, so there is no need to worry about large aggregation groups
- Service availability is set to 99% as a standard. That guarantees network reliability and the quality of the services that we provide
- 24/7 telephone support
- The service is not limited to one place. If you have more office premises, the service can be provided for all of them and they can all be connected to your corporate network

What we need to know to prepare a perfect offer for you

- Data service transmission speed requirements
- Required SLA rate
- Your data network topology and the specified transfer point of the service
- Whether it is necessary to assign public IP addresses
